March 20-17, 2017, Northeast Asia Logistics Information Service Network (NEAL-NET) 20th Technical Meeting held in Tokyo, Japan. The Chinese representatives from NEAL-NET Secretariat attended the meeting with relevant government officials and technical experts from Japan and South Korea.

At the meeting, China, Japan and South Korea completed the revision of NEAL-NET manager's manual and agreed on the release method. The three countries also discussed the definition of NEAL-NET customs clearance and requested to add new UN STATUSCODE to the United Nations' existing standard system. China introduced the situation of CargoSmart interface (ship dynamic interface) transformation after the access to NEAL-NET. After the completion of access work, it can provide coverage of the entire Chinese port of the ship dynamic information query. On the international

connection, China highlighted the IMO technical assistance project and the IPCSA (International Port Community System Association) Spain meeting, and carried out in-depth discussion about future international cooperation with Japan and South Korea. At the end of the meeting, China, Japan and South Korea have formulated plans for the future application, will carry out the questionnaire survey and increase the NEAL-NET propaganda.

Through this meeting, China, Japan and South Korea reached the agreement in the standard-setting, international organizations, user promotion, logistics information sharing and other aspects to promote international logistics information sharing cooperation among the three counties.
