

The 10th Technical Meeting of NEAL-NET Was Held in Japan

The 10th Technical Meeting of NEAL-NET was held during 18th-20th November in Tokyo Japan. The Three Countries discussed in depth focus on the following issues:

1. China introduced TA project of ADB and project of UN/ESCAP. Korea and Japan agreed to support for the project.

2. Three countries jointly agreed to implement unified user management based on option A. Following technical issues were discussed and agreed:

Database scheme, SAML assertion structure, token repository expiration mechanism and three interfaces SOAP message standards. For the detailed, please refer to the attachment.

Authentication procedure (user authorization process should be considered which grants the access right for application users).

Log data should be stored no less than three months (Including SP side access log and IDP side access log data).

Assertion exchanging for each authentication request.

Mutual trust among CJK IDP servers are based on fixed IP address binding at the first stage.

Unifying dynamic vessel status and container status interface format with authentication tag by regular service started.

Korea and Japan decided to complete unified user management development in this year and will finish test by the middle of February. China will join in the test after finishing system development. The Three Countries will complete the test before March 31, 2014. After completion of the test, the interfaces sharing service will be officially launched. The Three Countries will need to prepare user manuals by their own language and publicly on the corresponding website.

3. The Three Countries had discussed the interface data quality and put forward the proposed solutions.

4. The Three countries plan to open service ports on planning. Currently China has shared ports terminal or berth code list on NEAL-NET website, Japan and South Korea will provide their own ports terminal or berth code lists in early December.

5. Japan and Korea have reached a preliminary intention of sharing logistics statistics. China will discuss the issue in internal meeting.

6. The Three countries jointly agreed the main tasks about next stage:

The Three Countries will continue to improve the development of the unified user manual and other documentation through teleconferencing.

The Three Countries will actively carry out the development work of unified user management module, and carry out the tests between the Three Countries.

Japan and Korea will provide ports terminal or berth code list to NEAL-NET secretariat and announce to NEAL-NET website in early December 2013.

China will discuss internally to confirm the sharing content of the logistics statistics, and the Three Countries will discuss the issue on the CJK director's meeting for CJK ministerial conference.

The Three Countries will research the next stage working about logistics information sharing among CJK.

The Three Countries will soon confirm the relevant information of the 11th technical meeting.
