

The 4th NEAL-NET Technical Meeting Was Held in Hangzhou

The 4th NEAL-NET Technical Meeting was held in National Public Transport and Logistics Information Sharing Platform for Transportation & Logistics (LOGINK) in Hangzhou, China, on 7 December 2011. Technicians of The Three Countries jointly reviewed and confirmed the 2012 technical work plan, discussed the technical framework of user registration and user authentication, also reviewed the definition of dynamic container vessel status sharing standards.

The meeting clarified the 2012 work plan of NEAL-NET, including the dynamic container vessel status information sharing, container status information sharing, information sharing standards development of public nodes for inland carriage and the pre-research on information sharing standards of dangerous cargos. In addition, the meeting decided the 2012 technical meeting agenda, in which the 5th NEAL-NET Technical Meeting will be held in Korea in March.

Delegates summarized and concluded the issues that emerged during the pilot project implementation of dynamic container vessel status information sharing.

Delegates also demonstrated the technical framework proposal of user registration and user authentication that presented by China and Japan respectively, and carried out heated discussion on these technical frameworks. The agreement on user registration procedure had been finally reached. The Three Countries also agreed that they would carry out the research on information sharing of registered users, so as to reach the consensus in the next technical meeting.
